

# Artefacts Management

Product sheet 

Effective artefact and document management is critical to maintaining a comprehensive Governance, Risk, and Compliance (GRC) posture, and achieving guaranteed audit readiness.

Cybervergent's Artefacts Management provides a centralized, intelligent hub for creating, editing, and tracking all compliance-related documents within a secure, web-based environment. With powerful features like real-time autosaving, detailed version history, and bulk uploads, teams can collaborate seamlessly and maintain complete control over document integrity without the inefficiencies of manual file handling.

## Key Capabilities

### Online Editing Without Downloading

Work on compliance documents directly within the platform. No downloads, no external tools, just seamless in-browser editing for maximum security and workflow speed.

### Autosave in Real Time

Every change is instantly and automatically saved, ensuring data integrity and that no work or action is lost (critical for audit trails).

### Version History & Change Tracking

Easily review previous versions of documents, track changes, and restore earlier drafts when needed.

### Bulk Upload & Edit

Upload multiple policies, reports, and audit evidence at once and edit them directly in the platform, saving valuable time during audits and onboarding.

## Why Choose Data Security Observability?

### Simplify Collaboration

Empower teams to work together on compliance artefacts with full transparency and no file-sharing headaches.

### Stay Audit-Ready

Keep an up-to-date record of document changes and history for regulatory reviews or internal audits.

### Save Time and Reduce Errors

Eliminate the hassle of manual downloads, version mismatches, and missed updates.

### Centralize Critical Content

Store, access, and manage all governance and compliance documents from one secure location.

## Conclusion

Cybervergent Artefacts Management provides your organization with a smarter way to handle compliance documentation online, in real-time, and with full traceability. Whether you're preparing for an audit, updating risk controls, or managing policies across various teams, you can collaborate with confidence, speed, and complete control, all within the Cybervergent platform.

## Who Needs Cybervergent Artefacts Management?

### Compliance Teams

Responsible for creating, maintaining, and submitting audit-ready documents and artifacts in a structured, trackable way.

### Security Analysts & Engineers

Updating control-related artifacts without switch tools or systems.

### IT & Risk Managers

Managing policy documents, evidence, reports, and technical artefacts in one governed environment.
