

Data Security Posture Management (DSPM)

Organizations struggle with fragmented data, leaving sensitive information vulnerable and hard to manage. **Cybervergent TrustPulse** offers Data Security Posture Management (DSPM) solution that automates classification, organization, and monitoring across cloud and on-premises environments, ensuring secure and compliant data access. Strengthen your security posture with intelligent, automated data governance today.

Key Capabilities

Automated Data Classification

Seamlessly categorize data based on sensitivity and business context (Confidential, Restricted, Public), ensuring proper handling and compliance.

Granular Access Management

Define and enforce access policies to reduce exposure to unauthorized data access and minimize insider threats.

Comprehensive Storage Visibility

Identify where data resides across various storage types (cloud, on-prem, hybrid), mitigating risks like shadow data and untracked data silos.

Contextual Data Mapping

Align data across various categories such as customer, employee, and financial data—to meet your organization's specific needs and compliance requirements.

Why Choose Cybervergent DSPM Solution?

Enhanced Data Visibility

Gain deeper insights into your data assets across platforms, ensuring better risk management and decision-making.

Rapid Data Remediation

Quickly identify misconfigured or orphaned data, ensuring timely remediation and reducing the risk of data leaks or breaches.

Zero Trust Enabler

Support your Zero Trust security framework by enforcing least-privilege access and ensuring that only authorized users can access sensitive data.

Efficient Data Governance

Automate and streamline the data governance process, reducing manual effort and ensuring that data remains organized and secure throughout its lifecycle.

Who Should Use DSPM?

Security Teams

Who need to monitor and control data access across multiple environments, reducing the risk of unauthorized data exposure.

Compliance Officers

Tasked with classifying, managing, and reporting data to meet legal and regulatory audit requirements.

IT Administrators

Focused on improving data storage hygiene, access governance, and ensuring that sensitive data is properly handled.

Conclusion

TrustPulse DSPM solution helps businesses maintain control over their data, safeguard sensitive information, and comply with regulatory standards. By choosing Cybervergent, you're investing in a robust, scalable data security framework that supports your organization's long-term success and resilience.
