

Unified Data & Risk Posture Management for Modern Security Teams

Cybervergent TrustPulse(TP) is a comprehensive cybersecurity platform that empowers organizations to manage and secure their data, ensure compliance, uphold privacy standards, and proactively address risk. Built to function across cloud and on-premises environments, TrustPulse consolidates visibility, control, and decision-making into a single streamlined interface.

At the heart of TrustPulse are two integrated capabilities

- 

DSPM (Data Security Posture Management)
- 

RPM (Risk Posture Management)

Together, these modules empower businesses to safeguard their information, meet compliance standards, and proactively manage risk.

Key Modules

Data Security Posture Management (DSPM)

Data Posture Management

Gain complete visibility into your data landscape. Understand where your data resides, who has access to it, and how it's classified.

Key Features

- 

Data classification
(Confidential, Restricted, Public)
- 

Access controls based on user roles and data sensitivity
- 

Comprehensive storage visibility (on-prem, cloud, hybrid)

Benefits

- 

Mitigate shadow data risks.
- 

Enforce least-privilege access policies.
- 

Strengthen overall data governance.

Why Choose TrustPulse Modules?

Centralized Control

One unified platform for managing data security, compliance, privacy, and risk

Real-Time Insights

Make faster, more informed decisions with up-to-date risk and compliance data.

Built-in Regulatory Alignment

Out-of-the-box support for global compliance frameworks.

Scalability

Suitable for organizations of all sizes, from SMEs to large enterprises.

Easy Integration

Seamlessly integrates with existing cloud and on-prem systems.

Compliance Management

Simplify your journey to compliance with automatic tracking and built-in frameworks, ensuring you're always audit-ready.

Key Features

Pre-configured frameworks (NIST CSF, COBIT, ITIL)

Global standards support (ISO 27001, ISO 9001, PCI DSS)

Compliance with key regulations (GDPR, HIPAA, SOX)

Benefits

- Achieve global regulatory compliance.
- Streamline audit preparation.
- Minimize legal and financial exposure.

Privacy Management

Protect personal and sensitive data while staying ahead of evolving privacy regulations.

Key Features

PII discovery, classification, and inventory

Privacy access controls and monitoring

Automated incident response and privacy risk assessments

Benefits

- Achieve global regulatory compliance.
- Streamline audit preparation.
- Minimize legal and financial exposure.

Risk Posture Management (RPM)

Risk Identification & Classification

Identify and classify security risks with real-time intelligence to understand and prioritize threats.

Key Features

Risk identification and classification (High, Medium, Low)

Real-time tracking of risk status

Categorization of risks (Technological, Operational, Third-party)

Benefits

- Enable data-driven, proactive risk management.
- Improve response to internal and external threats.
- Optimize resource allocation for risk mitigation.

Target Users

Enterprises

Managing sensitive customer, financial, or healthcare data

Compliance teams

Preparing for audits, certifications, and regulatory assessments.

Security teams

Working to reduce data sprawl and manage exposure to risk

Privacy officers

Ensuring ongoing regulatory data protection and privacy compliance.

Risk managers

Monitoring and managing operational, third-party, or emerging threats.

Conclusion

Cybervergent TrustPulse is the ultimate solution for organizations seeking to secure their data, manage compliance, and proactively handle risks. With built-in modules for data security posture management and risk posture management, TrustPulse gives businesses the tools they need to navigate the complex cybersecurity and regulatory environment with confidence.
